PartMaker certification for DECO [a-line]

Release Date: April 2006

Tornos would like to congratulate the company PartMaker Inc. for successfully passing Tornos' certification for programming the Tornos DECO [a-line] single spindle Swiss machines.

This certification is awarded to the PartMaker software of PartMaker Inc. which successfully generated 3 TB-DECO part programs with zero errors through the use of its PartMaker post processor software. The 3 part programs were subsequently loaded into a DECO 13a machine and produced parts to print specifications.

In order to properly evaluate the PartMaker software capabilities, the 3 complex parts were chosen for the certification process possessing multiple and diversified machining operations. However, please note that these tests do not cover 100% of the various machining possibilities that can be achieved on the DECO [a-line], nor does it assure that another post processor dedicated to another DECO [a-line] model such as a DECO 10a or a DECO 20a will, in fact, generate a TB-DECO program error free.

This certification should provide our customers with some assurance that PartMaker software is capable of programming the Tornos DECO [a-line] machines.

Both Tornos S.A. and PartMaker Inc. will continue to make improvements, advancements and additions to our respective software that will give our mutual customers enhanced products in the future.

The details of the certification, as well as the drawings of the 3 parts used for the certification are available on the Tornos website: www.tornos.com
