More than 225 guests attended Tornos-hosted Expertentreff in Rottweil, Germany

Moutier, Switzerland, June 29, 2017 – Key players from throughout the turned parts manufacturing value chain gathered Tuesday, June 27, in Rottweil, Germany, for the first-ever Expertentreff on the subject of Hochfeste Drehteile, a full-day experts' event focusing on complex solid parts made of high-strength and often exotic raw materials. Tornos hosted and organized the event with together MAV, the leading German specialist magazine.

More than 225 guests representing parts manufacturing companies across several industries took part in the daylong event held in Rottweil's unique and historic 3,200-square-meter Kraftwerk event space.

With the ongoing evolution of the internal combustion engine and the gradual emergence of electro mobility (e-mobility), market requirements for ever-more complex turned parts made of high-strength raw materials are on the rise. These trends are reaching into medical technology too and—in both industrial segments—new production strategies are needed. Perfect parts are the aim and, to achieve that, machines with matching kinematics, parts collection systems, tools, controls, clamping systems, lubrication and chip management solutions are needed.

These and other challenges were in the spotlight at the Expertentreff. Academic keynote speaker were Prof. Dr. Ing. Siegfried Schmalzried from Hochschule Furtwangen. Giving the customer keynote was Mr. Ferdinand Lenhart from Berger Feintechnik, part of the Berger Group.

Industry partner keynote addresses were given by representatives of UGITECH, FANUC, SCHLENKER, GÖLTENBODT, HORN, MÜLLER HYDRAULIK, HANDLING TECH and LNS.

In addition, Tornos exhibited four machines at the event: MultiSwiss 8x26, EvoDECO 10, Swiss GT 32, and SwissNano.

Company profile

Tornos Group is one of the global leaders for the development, production and distribution of Swiss-type automatic lathes and multi-spindle machines. The company's history dates back to 1880, placing Tornos at the beginning of Swiss-type lathe technology. The Group primarily manufactures CNC Swiss-type (sliding headstock) turning machines, multi-spindle machines with numerical or cam control, and machining centers for complex parts requiring high precision (Almac). Tornos is headquartered in Switzerland. Through a global sales and service network, unique solutions are supplied to customers in dedicated market segments such as Automotive, Medical and dental technology, Micromechanics, and Electronics. With its approximately 630 employees (FTEs), Tornos Group generated sales of CHF 136 million in 2016.
