Tornos' exclusive, immersive The Mini Factory: Medtech event in Barcelona showcases the most innovative solutions for medical technology manufacturing

Moutier, Switzerland, June 27, 2023 - Leading decision-makers in the medical technology industry will discover what the future may look like in this sector, from July 4 to 6, 2023, in the center of Barcelona on the occasion of The Mini Factory: Medtech, Tornos' exclusive and immersive experience presenting a wide range of manufacturing solutions from foremost medtech market partners.

An exclusive three-day, invitation-only immersive experience, The Mini Factory: Medtech will bring together decision-makers from the medical technology sector and market leaders in this fast-growing manufacturing segment. In a unique venue—the Tuset Manhattan, a renovated industrial building located on Carrer Aragó in the heart of Barcelona—guests will discover the complete manufacturing process around a specific dental part.

Thanks to Tornos and 13 reference partners representing the entire medical technology manufacturing process, guests will be fully immersed in the creation of the part, from the initial scan of the patient's tooth and conversion of this scan into a 3D model, through to the complete machining process—including peripherals, tools, materials and consumables—quality control and surface treatment.

Tornos' Swiss GT 26 with B axis and the Swiss DT 26/6 HP will take center stage at this first event. The latest-generation Swiss DT and Swiss GT are undoubtedly the new allies of manufacturers seeking to exceed their own expectations, to be extremely competitive and to have a solution that evolves in line with their own business strategies.

At the same time, guests will benefit from guided tours providing an up-close look at the various stages of the manufacturing process, and participating partners will give detailed presentations of their respective solutions for medical technology manufacturing.

The Mini Factory: Medtech, a unique, industry-specific, value-added event, is further proof of Tornos' 130-year heritage of innovation. A pioneer in development and manufacture of automatic lathes, Tornos today is the reference source for decision-makers in single-spindle and multispindle lathes, as well as micro-milling solutions and peripherals such as automation and bar feeders, software and services. The Mini Factory: Medtech is made possible, in part, by Tornos' close relationships with leading suppliers of peripheral solutions such as tooling and cutting tools, relationships that ultimately benefit customers.

At the Mini Factory: Medtech, guests will also find Tornos' comprehensive technical expertise, from training and services to special cutting tools, machining of complex materials and machine setup, ensuring that customers get optimum performance from their Tornos machines.

With the Mini Factory: Medtech already attracting strong interest in Spain and beyond, Tornos plans to extend this unique concept to other industries and markets in the coming months.

Company profile

Tornos Group is one of the global leaders for the development, production, and distribution of Swiss-type automatic lathes and multispindle machines. The company's history dates back to 1880 and marked the beginning of Swiss-type lathe technology. The company primarily manufactures CNC sliding headstock Swiss-type automatic lathes, multispindle machines, and precision machining centers for complex parts. Tornos is headquartered in Switzerland. A worldwide sales and service network offers unique solutions to customers in the target automotive, medical and dental technology, micromechanics, and electronics industries. The Tornos Group employs around 680 persons (FTE's) in total.
